Re: Petition to Establish Docket to Consider Amendments to Interconnection
Agreements Resulting from Change of Law, Kentucky Broadband Act, PSC
2004-00501

Dear Ms. O'Donnell:

Enclosed please find an original and ten (10) copies of Comments of Aero
Communications, LLC for filing in the docket referenced above. If there are any
questions, please contact me at 510 903-1304. Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read 'Kristopher E. Twomey', written over a horizontal line.

COMMONWEALTH OF KENTUCKY
BEFORE THE PUBLIC SERVICE COMMISSION

RECEIVED

MAR 10 2005

PUBLIC SERVICE
COMMISSION

In the Matter of:

PETITION TO ESTABLISH DOCKET)
TO CONSIDER AMENDMENTS TO)
INTERCONNECTION AGREEMENTS)
RESULTING FROM CHANGE OF LAW,) Case No. 2004-00501
KENTUCKY BROADBAND ACT)

COMMENTS OF AERO COMMUNICATIONS, LLC

Aero Communications, LLC (“Aero”), by and through counsel, hereby submits the following reply comments and procedural proposals for Case No. 2004-00501. These comments are a reply to BellSouth’s Response filed on February 22, 2005 and to statements made by BellSouth counsel at the informal conference held on February 24, 2005. In addition, these comments are in compliance with the request by the Commission to file procedural proposals in this docket.

BellSouth is attempting to twist the wording of the Kentucky Broadband Act to deny consumers their right to choose a UNE-P competitive local exchange carrier (“CLEC”) for local voice services and maintain access to digital subscriber line service. This Commission has already ruled on this issue and upheld consumers’ rights to choose their preferred local voice services carrier.¹ When read in its entirety, the Kentucky Broadband Act (“the Act”) can not reasonably be interpreted to restrict competition in the way BellSouth claims. Moreover, this issue involves a change of law amendment that CLECs have refused to sign. The proper mechanism for BellSouth to address this issue is either through seeking arbitration of the amendment, or through a formal complaint. Meanwhile, BellSouth has unilaterally imposed its change of law interpretation and is refusing to comply with its interconnection agreement (“ICA”) with Aero.² This Petition

¹ Order, Petition of Cinergy Communications Company for Arbitration of an Interconnection Agreement with BellSouth Telecommunications, Inc. Pursuant to 47 U.S.C. Section 252, Case 2001-000432, 2002 Ky. PUC Lexis 764 (Ky. P.S.C. July 12, 2002) (“2002 Cinergy Order”).

² Aero Communications adopted the Network Telephone/BellSouth interconnection agreement. The parties later amended that agreement to include the language found in the 2002 Cinergy Order allowing UNE-P customers to receive DSL service.

should be denied with prejudice and BellSouth should be ordered to comply with its existing interconnection agreements pending resolution of these issues.

I. Background

BellSouth filed its “Response to CLEC Comments” on February 22, 2004. Aero did not receive this filing prior to the informal conference held at Commission on February 24, 2004. Amy Dougherty of Commission staff ordered the parties to file comments within by March 7, 2005.

II. BellSouth’s Motions Should be Denied

1. BellSouth’s Motion to Implement the Act Should be Denied Because the Act does not Affect the Current ICA between BellSouth and Aero

BellSouth insists that this matter involves one discreet legal issue: the effect of the Kentucky Broadband Act on the ICAs between BellSouth and the CLECs. Although Aero clearly and straightforwardly responded to this issue in its January 24, 2004 filing, BellSouth failed to address Aero’s arguments in its February 22, 2004 filing. Instead, BellSouth claimed that the CLECs were using little more than dilatory and diversionary tactics.

To respond to this initial charge, these are the facts. Aero began negotiating with BellSouth on this issue in late July 2004. Aero disagreed with BellSouth’s interpretation of the Act and refused to sign BellSouth’s proposed ICA amendment. Negotiations continued for a reasonable settlement through November but a deal could not be reached. During this time, Aero insisted upon compliance with the effective ICA. In its January 24, 2005 filing, Aero provided concise arguments responding to BellSouth’s Petition. “Dilatory” is not an applicable term to Aero’s behavior. Aero contends that BellSouth’s proposed amendment reflects a misinterpretation of the Act. Aero’s actions thus far are intended to enforce its rights under its interconnection agreement.

a. Act Does Not Apply to UNE-P

So that there is no further ambiguity or basis to claim delay, Aero will restate its position as to this single legal issue. Aero agrees that the Act is valid and in effect. Aero has no desire to delay the implementation of the Act. In fact, the Act is arguably favorable to Aero's affiliated Internet service provider. The Act is, however, irrelevant to Aero's ICA with BellSouth. The Act, simply does not affect the requirement that BellSouth provide UNE-P to Aero, because: 1) the Act only deregulates broadband; and 2) the result of removing the UNE-P requirement would be that customers who want DSL must choose BellSouth as their local voice service provider, which would fly in the face of the express purposes of the Act, as well as federal policy favoring competition and consumer choice. There is, therefore, no basis to amend the current ICA between Aero and BellSouth.

b. The Act Could Not Have Been Intended to Destroy Local Voice Competition

To say that the issue is a purely *legal* one is a tool for BellSouth to use in avoiding the big picture—the Kentucky Legislature's intended effect of the Act on the telecommunications market as a whole, including the local voice market. It would be a mistake to look at the intentions of the Act in a vacuum; especially when the effect of such an interpretation would have such a significant effect on competition in the local voice market. This Commission maintains full authority to regulate local voice services, even if the customer happens to want to receive DSL as well.³

³ As discussed briefly in the informal conference, the California Public Utilities Commission recently ruled on this issue. In a case filed by a CLEC, the CPUC held that SBC must allow a consumer served by a UNE-P CLEC to have access to DSL. The CPUC found that by requiring SBC to cooperate, the CPUC was regulating voice competition, not broadband. "It is not the provision of DSL services that is at issue, but the effect of SBC-CA's practices related to SBC Yahoo! DSL on the market for local voice services." The decision is attached as Exhibit A. *Telscape Communications v. Pacific Bell Telephone Company*, D. 04-12-053 (December 16, 2004) The CPUC goes on to cite other states, including Kentucky, that have made similar rulings. See e.g., *Petition by Florida Digital Network, Inc. for arbitration of certain terms and conditions of proposed interconnection and resale agreement with BellSouth Telecommunications, Inc. under the Telecommunications Act of 1996*, Florida Public Service Commission Docket No. 010098-TP, Order No. PSC-02-0765-FOF-TP, 2002 Fla. PUC LEXIS 401 (June 2, 2002) (arbitration); *In re BellSouth's provision of ADSL Service to end-users over CLEC loops*, Louisiana Public Service Commission, Docket R-26173, Order R-26173, 2002 La. PUC LEXIS 20 (Dec. 18, 2002) (rulemaking); *Petition of MCI Metro Access Transmission Services, LLC and MCI WorldCom Communications, Inc. for Arbitration of Certain Terms and Conditions of Proposed Agreement with BellSouth Telecommunications, Inc. Concerning*

When one takes a provision of law out of context, it is easy to interpret it in a variety of ways. Here, BellSouth has taken a provision of the Act (Section 3(1)(a), relating to the regulation of “the availability of facilities or equipment used to provide broadband service”) out of context. It cannot be reasonably argued that the Assembly intended for the Act to end local voice competition in order to spur broadband infiltration, nor would maintaining the current ICA in force and denying BellSouth’s motion conflict at all with the Act.

If there is one overriding purpose of the Act, it is to increase the deployment of broadband to consumers, while increasing consumer choice and competition.⁴ Under BellSouth’s interpretation, any customer who wants DSL would have no choice but to choose BellSouth for local voice service. This creates a situation whereby the wider broadband is deployed, the less competition will exist in the local voice market. Theoretically, if virtually all Kentucky consumers were capable of receiving DSL, as the Assembly and Governor apparently desires, those consumers will also all be BellSouth local voice customers, according to BellSouth’s interpretation of the Act. There would be no competition because CLECs would be shut out of any home with DSL. Conversely then, BellSouth’s interpretation of the Act would effectively eliminate competition and consumer choice in direct contradiction to the stated goals of the Act. This can not reasonably be the intention of the Legislature.

On the other hand, Aero’s interpretation of the Act does not conflict with the express purposes or requirements of the Act. By requiring BellSouth to continue offering UNE-P to Aero’s customers, the Commission would in no way be stifling the expansion of broadband *or* competition *or* consumer choice in broadband.

Interconnection and Resale under the Telecommunications Act of 1996, Georgia Public Utilities Commission, Docket No. 11901-U, 2003 Ga. PUC LEXIS 38 (Oct. 21, 2003) (arbitration); *Petition of Cinergy Communications Company for Arbitration of an Interconnection Agreement with BellSouth Telecommunications, Inc. pursuant to 47 U.S.C. Section 252*, Kentucky Public Service Commission Case 2001-00432, 2002 Ky. PUC LEXIS 722 (Oct. 15, 2002), *aff’d subnom. BellSouth Telecommunications, Inc. v. Cinergy Communications Co.*, 297 F.Supp.2d 946 (E.D.Ky.2003) (arbitration).

⁴ See KRS 278.546(1)

c. BellSouth is Seeking a Monopoly

Aero does concur with BellSouth that under Kentucky law, “if it walks like a duck and quacks like a duck, it is a duck.”⁵ Here, an incumbent local exchange carrier (“ILEC”) is taking a new law out of context, ignoring its obligations to arbitrate under its ICAs, and is seeking to force CLECs into an amendment that would lead to the ILEC’s monopoly over local voice service. Using this analogy, BellSouth’s Petition walks like it seeks to squash competition and BellSouth’s arguments quack like an unreformed monopolist. Therefore, this Commission should find that this Petition has no merit in the competitive market place envisioned by the Federal Communications Commission, Congress, the Kentucky PSC, and the elected leaders of Kentucky. Not only is BellSouth’s argument unsupported and unpersuasive, its attempt to then impose its interpretation unilaterally needs to be discouraged by the Commission. Aero respectfully requests that BellSouth’s Motion to Implement the Act be Denied, or, stated another way, that the Commission find that the Act has no effect on the Cinergy Order.

2. Request to Establish Briefing Schedule Should be Granted if Case Allowed to Continue, but with Conditions Attached

If the Commission does not dismiss BellSouth’s Petition, Aero has no opposition to BellSouth’s Motion for the establishment of a briefing schedule and oral arguments, so long as two conditions are attached. First, Aero would request to conduct discovery in order to determine whether BellSouth has self-effectuated its change of law interpretation. In light of BellSouth’s interpretation of the Act, credits for the wholesale provision of voice services have been withheld from Aero since November 2004.⁶ Aero needs to be able to discover information that would show how BellSouth dealt with the Act internally as well as all records of the above-mentioned withholding. It appears that BellSouth effectively appointed itself as an ALJ in this matter, made a ruling, and then

⁵ BellSouth’s Response at 7, Ky. Milk Marketing and Antimonopoly Comm. V. The Kroger Co., 691 S.W.2d 893, 897 (Ky. 1985).

⁶ For consumer seeking DSL and local voice services, BellSouth requires CLECs to order the voice services as resale. Then every month, BellSouth issues credits in an amount equal to the difference between the resale rate and UNE-P rate. Since November 2004, approximately the time that negotiations between the parties ceased, BellSouth has refused to issue these credits.

enforced its decision. Aero would need access to internal BellSouth documents to prove this.

Second, BellSouth should be ordered to comply with its existing ICAs. BellSouth should allow Aero to be able to place orders during the pendency of this proceeding and sell Aero voice services at the required wholesale rate. BellSouth should be ordered to pay all outstanding credits immediately.

III. Aero's Position on Cinergy Motions

1. BellSouth's Petition Should be Dismissed with Prejudice

Aero concurs with Cinergy that the Commission should dismiss BellSouth's Petition. Aero, however, believes that the Petition should be dismissed with prejudice as there is no practical purpose for allowing BellSouth the opportunity to re-file this Petition in the future.

2. The Commission Should Not Consider Cinergy's Counterclaim Regarding the Commingling of Wholesale DSL & UNE-L

Although Aero continues to concur with Cinergy regarding the merits of the commingling issue, it is not necessary to address this issue in this proceeding. In so far as this matter touches upon commingling, there are other more appropriate dockets for commingling to be addressed such as, the "Federal Change of Law Docket."⁷

3. The Commission Should Not Consolidate BellSouth's change of law request with other change of law issues that will arise in light of FCC's USTA II Remand order and TRO

Applying similar logic, it makes little sense to consolidate this issue with the Federal Change of Law Docket. The change of law described in BellSouth's Petition does not result from any FCC action, whereas all of the issues in the Federal Change of Law Docket do. Instead, this issue deals with BellSouth's self-declared interpretation of a

⁷ *Petition of BellSouth Telecommunications, Inc. to Establish Generic Docket to Consider Amendments to Interconnection Agreements resulting from Changes of Law*, Case No. 2004-00427. ("Federal Change of Law Docket")

Kentucky state law that BellSouth has unilaterally imposed on Aero. Aero's preferred course of action is to file a formal complaint at the Commission to determine this issue as well as several other outstanding issues regarding payment for traffic under the ICA. Subsuming BellSouth's actions into another open docket would merely delay the outcome and cause material harm to Aero and its customers.

4. Injunctive Relief Should be Granted

Aero concurs with Cinergy that BellSouth should be required to pay all credits and cease from any further withholding of credits. Aero also agrees that BellSouth should be ordered to continue to abide by its ICAs, including allowing the CLECs to continue to place orders for new customers.

IV. Aero's Motions

1. BellSouth's Petition Should be Dismissed with Prejudice

Aero moves that the Commission dismiss this case in its entirety and with prejudice. Aero should nonetheless be allowed to seek subsequent enforcement of its ICA with BellSouth.

2. The Commission Should Rule that the Act Does Not Apply to UNE-P

Aero moves for declaratory relief; that the Commission rule that the Act does not apply to its regulation of UNE-P. As discussed above, Aero contends that the Act simply does not apply to the 2002 Cinergy Order, and thus the requirement that BellSouth provide UNE-P to Aero's consumers who also wish to receive DSL from Aero's affiliated ISP.

The Commission is charged with the task of implementing and interpreting statutes.⁸ Aero wants nothing more than to avoid diversion and delay because any delay would merely extend BellSouth's refusal to abide by the ICA, and thus, cost Aero and the other CLECs significantly. In order to resolve this dispute entirely and conclusively, and

⁸ "The Commission is charged with the task of implementing laws within its jurisdiction, including those dealing with the regulation of telecommunications and broadband." KRS 278.040(1),(3)

to avoid such disagreements over the applicability of the Act in the future, the Commission should clarify the Act by finding specifically that it does not apply to UNE-P.

3. Injunctive Relief Should be Granted

Aero moves that the Commission order BellSouth to abide by the terms of the current ICA in its entirety pending the resolution of the matter. This includes but is not limited to continuing to allow Aero to place new orders for local voice service, and from this point forward, issuing credits such that Aero effectively continues to receive voice services at the proper UNE-P rate, as discussed above. The Commission should further order the parties to continue negotiations or declare them at an impasse, and seek proper resolution via formal complaint or arbitration.

4. Compensatory Relief Should be Granted

Aero moves for compensatory relief from BellSouth. BellSouth should be ordered to issue all current credits owed to Aero. BellSouth should be ordered to pay any and all owed invoices and interest. Although this may technically be a “billing matter,” and thus outside of the scope of the “single legal issue” that BellSouth has framed, billing matters are now directly relevant because BellSouth has created them by refusing to follow the ICAs.⁹ Payments are due, and BellSouth is refusing based on this change of law interpretation. Aero’s ICA specifically states,

Except as otherwise stated in this Agreement, if any dispute arises as to the enforcement of terms and conditions of this Agreement, and/or as to the interpretation of any provision of this Agreement, the aggrieved Party, to the extent seeking resolution of such dispute, must seek such resolution before the Commission or the FCC in accordance with the Act. Each Party reserves any rights it may have to seek judicial review of any ruling made by the Commission concerning this Agreement. Either Party may seek expedited resolution by the Commission. During the Commission proceeding each Party shall continue to perform its obligations under this Agreement; provided, however that neither Party shall be required to act in an unlawful fashion.¹⁰

⁹ See footnote 21 of BellSouth’s February 22, 2005 Response.

¹⁰ Section 10.1 of the Aero/BellSouth ICA.

Aero should be compensated to reflect any other lost or withheld revenue resulting from the above-described unilateral and illegal action by BellSouth.

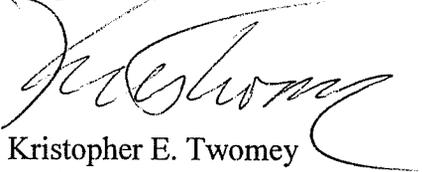

5. Penalties Should be Assessed Against BellSouth

Aero moves that the Commission impose sanctions against BellSouth for acting in bad faith by self-effectuating a change of law and unilaterally enforcing a new ICA. To allow this behavior by BellSouth would set a dangerous precedent. Whenever a new law merely relating to deregulation is passed, BellSouth could impose an interpretation of the law in its favor on its CLECs and enforce a new contract upon them unilaterally with impunity. Even worse, BellSouth could (as they are doing now) withhold credits from CLECs and prevent them from placing new orders. The Commission must send a message that this is unacceptable and will not be tolerated.

V. Conclusion

For the foregoing reasons, Aero respectfully requests that the Commission dismiss the Petition in Case No. 2004-00501 with prejudice, Aero's motions be granted, and all further appropriate relief be established.

Respectfully submitted,

Kristopher E. Twomey
Andrew M. Ganz

OPINION RESOLVING COMPLAINT

1. Summary

This complaint, filed by Telscape Communications, Inc. (Telscape), in which AT&T Communications of California, Inc. (AT&T) and WorldCom, Inc. (MCI)¹ have intervened,² alleges that several policies and practices of defendant Pacific Bell Telephone Company (SBC-CA)³ with respect to the provision of local exchange telephone service (local voice service) are anticompetitive and discriminatory. We find that SBC-CA's refusal to process orders for changing a customer's local voice service to that of a competitive local exchange carrier (CLEC) if the customer also subscribes to SBC Yahoo! DSL (SBC-CA's retail high-speed digital subscriber line (DSL)⁴ service) violates Pub. Util. Code §§ 451 and 453(a).⁵

¹ During the course of this proceeding, WorldCom changed its name to MCI.

² We sometimes refer to complainant Telscape and the two intervenors collectively as "complainants."

³ During the course of this proceeding, defendant began using the name SBC California, and we will use it as well.

⁴ DSL is a broadband service that relies on the traditional copper telephone wire to transmit broadband data to and from the service customer's location. The signals for DSL travel through the high frequency portion of the loop (HFPL), while the signals for ordinary telephone service travel through the low frequency portion of the loop (LFPL). There are several types of DSL; asymmetric DSL is used in the circumstances addressed in this proceeding. Although the existence of types of DSL is sometimes noted by using the acronym "xDSL," we refer simply to "DSL."

A table of acronyms is provided in Appendix A.

⁵ Unless otherwise indicated, all subsequent citations to sections refer to the Public Utilities Code, and citations to rules refer to the Rules of Practice and Procedure, which are codified at Chapter 1, Division 1 of Title 20 of the California Code of Regulations.

We further find that the partial settlement entered into by AT&T, MCI, and SBC-CA to resolve allegations that SBC-CA has abused the winback process and encouraged incorrect accusations of slamming is reasonable in light of the whole record, consistent with law, and in the public interest. We therefore approve it. We further require SBC-CA to extend its third-party verification process to include slamming allegations for residential local voice service.

We conclude that Telscape has not demonstrated that its broad objections to the functioning of SBC-CA's operational support systems (OSS) are well-founded, but we order SBC-CA to remedy deficiencies in its treatment of certain non-recurring service order charges, in its handling of billing disputes with CLECs, and in its implementation of its Performance Incentives Plan.

This proceeding is closed.

2. Regulatory Background

For more than a decade, we have taken steps to foster telecommunications innovation and competitive markets, as exemplified in the Open Access and Network Architecture Development of Dominant Carrier Networks proceeding (OANAD), R.93-04-003/I.93-04-002; the Competition for Local Exchange Service proceeding, R.95-04-043/I.95-04-044; our decision (Decision (D.) 02-09-050) on SBC-CA's application for long distance authority pursuant to Sec. 271 of the Telecommunications Act of 1996, Pub. L. No. 104-104 (1996 Act);⁶ and our decision on SBC-CA's compliance with the requirements of Sec. 709.2 (D.02-12-081). The Legislature has consistently expressed its policy of

⁶ The Federal Communications Commission (FCC) subsequently approved SBC-CA's entry into the long-distance market in *Application by SBC Communications Inc., Pacific Bell Telephone Company, and Southwestern Bell Communications Services Inc., for Authorization to Provide In-Region InterLATA Services in California*, WC Docket No. 02-306, 17. F.C.C.R. 25,650 (Dec. 19, 2002).

encouraging open markets and consumer choice and discouraging anticompetitive conduct. See Secs. 709; 709.2, subd. 2; 709.5.

With the passage of the 1996 Act, the federal government also asserted its interest in opening local voice service markets to competition and promoting innovation in telecommunications, and provided us with additional direction and requirements for opening telecommunications markets to competition.⁷ The 1996 Act also preserved states' authority to enforce state law and to regulate, as long as the state activities do not substantially prevent implementation of the 1996 Act. (47 U.S.C. §§ 252(e)(3); 251(d)(3); 261(b), (c).)

Early in the process of establishing competitive markets, we noted our intention to continue monitoring the progress of competition on an ongoing basis and stated that we would not “prematurely remove regulatory safeguards which are in place to ensure that carriers cannot abuse their market power to the detriment of the public interest.” (D.96-03-020, 65 CPUC2d 156, 168.) In our Sec. 271 decision, we noted that our regulatory oversight was a reasonable check on the possibility of anticompetitive behavior. (D.02-09-050, p. 260 (*mimeo.*)). In D.02-12-081, we reiterated our determination to impose sanctions on

⁷ We note that the structure of conditions for competition is not completely established. The FCC recently revised some of its prior requirements for fostering meaningful competition. *Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers; Implementation of the Local Competition Provisions of the Telecommunications Act of 1996; Deployment of Wireline Services Offering Advanced Telecommunications Capability (TRO)*, CC Docket Nos. 01-338, 96-98, 98, 147, 18. F.C.C.R. 16, 978 (Aug. 21, 2003), *vacated in part and remanded in part, vacatur stayed, sub nom. United States Telecom Association v. Federal Communications Commission*, 359 F.3d 554 (D.C. Cir. 2004). (We refer to this order hereafter as the *Triennial Review Order*.) The UNE pricing and permanent line sharing phases of our OANAD proceeding, as well as the triennial review order nine-month phase of our Local Competition proceeding, are still active. Since this area of law remains dynamic, we cannot wait for complete certainty before we address the issues in this complaint.

demonstrated anticompetitive conduct. (p. 24, *mimeo*.) In this proceeding, we are presented with claims by some of SBC-CA's competitors that SBC-CA is not playing by the rules of a competitive local voice service marketplace.

3. Statement of Facts

3.1 Complainants

Telscape is a CLEC that focuses on the provision of local and long distance telephone service to Spanish-language dominant Hispanic households, largely in Southern California. It provides facilities-based services, using its own switches and unbundled network elements (UNEs) leased from SBC-CA; this arrangement is often referred to as UNE-Loop (UNE-L). Telscape also provides services using the "UNE platform" (UNE-P), which consists of leasing from SBC-CA all the elements needed for service to the end-user customer.

AT&T is a CLEC that provides local and long distance services, as well as DSL services in some areas. In California, it uses UNE-P for its mass market local voice services.⁸

MCI is a CLEC that is the largest competitive provider of local residential voice service in the United States. It provides local and long distance services, as well as DSL service in some areas. In California, it uses UNE-P for its mass market local voice services.

3.2 Defendant

SBC-CA is an incumbent local exchange carrier (ILEC) that provides local and long distance services. It is a wholly owned subsidiary of SBC Communications, Inc. (SBC), whose headquarters are in San Antonio, Texas. SBC-CA markets to mass market customers the retail product SBC Yahoo! DSL,

⁸ The parties have referred to residential and small business customers as "mass market" customers, as will we.

which consists of DSL transport provided by SBC Advanced Solutions, Inc. (ASI) through UNEs leased from SBC-CA; internet service provider (ISP) services provided by SBC Internet Services (SBC IS); and content provided by Yahoo!, Inc. The SBC Yahoo! DSL product is advertised throughout the 13-state area in which SBC operates. In California, the SBC Yahoo! DSL product is available only to SBC-CA local voice customers.

3.3 DSL and Local Voice Service

SBC-CA provides approximately 78% of residential local voice service in California. Statewide, all CLECs serve about 6% of customers. Assuming that the proportion in SBC-CA's service territory is roughly the statewide proportion, SBC-CA serves about 94% of the residential local voice customers in its territory.⁹

In California, about 49% of broadband connections utilize DSL, and 39%, cable modem. This is different from the nation as a whole, where 59% of broadband connections utilize cable modem and 34%, DSL.¹⁰

In the ordinary course, if a customer wishes to change her local voice provider from SBC-CA to a CLEC, he or she makes arrangements for service with the CLEC. The CLEC then makes a Local Service Request (LSR) to SBC-CA to "migrate" the customer's service to the CLEC. If the SBC-CA customer also subscribes to SBC Yahoo! DSL, however, SBC-CA will automatically reject the request for the local voice service migration. Telscape estimates that, when it investigated the situation about two years ago, approximately 10 percent of its

⁹ California Public Utilities Commission, "The Status of Telecommunications Competition in California: Third Report for the Year 2003," p. 16 (Oct. 31, 2003) (Third Competition Report). Data are as of the end of 2002. We take official notice of the information in the Third Competition Report pursuant to Rule 73.

¹⁰ Third Competition Report at 39.

LSRs were rejected because the potential customer had SBC Yahoo! DSL. SBC-CA rejected approximately 3,000 such LSRs from AT&T in the period from December 29, 2002 through May 3, 2003, and approximately 7,800 such LSRs from MCI in the period from January 1, 2003 to August 15, 2003.

The SBC-CA customer with SBC Yahoo! DSL who wants to change her local voice service to a CLEC must go through several steps. She must first find out that she cannot switch to the CLEC while she maintains SBC Yahoo! DSL. She must then cancel SBC Yahoo! DSL. She next must call the CLEC of her choice and arrange for local voice service. Once SBC-CA has processed the cancellation of SBC Yahoo! DSL, the LSR for the migration of local voice service to the CLEC can be processed. If the customer wants to regain DSL service, she must arrange for another DSL provider. (Some CLECs, such as Telscape, do not provide retail DSL service. Some, such as AT&T, do.)¹¹ With a new DSL provider, the customer will also have to install hardware and software for the new DSL service. The customer will then also need to find a new ISP to provide connection to the internet (including a new electronic mail (e-mail) address for the customer) using the new DSL service.

Very few SBC-CA Yahoo! DSL customers change their local voice service to a CLEC. Information reviewed by AT&T from several states where SBC Yahoo! DSL is offered shows that all potential AT&T customers informed by AT&T sales representatives that they would have to cancel SBC Yahoo! DSL in order to change their local voice service to AT&T indicated that they no longer wanted to change to AT&T. Because they have concluded that virtually no

¹¹ In some circumstances, it may not be possible to regain DSL service; *e.g.*, if no CLEC providing DSL transport has a collocation facility in a central office close to the customer.

potential customer with SBC Yahoo! DSL will change local voice service, AT&T and MCI instruct their sales representatives to ask potential customers whether they currently subscribe to SBC Yahoo! DSL, and to turn down the potential customer's business if the answer is "yes." Telscape does not have specific instructions for its sales representatives on this subject, but expects them also to advise potential customers with SBC Yahoo! DSL that Telscape will not be able to provide local voice service. The approximately 11,800 rejected AT&T and MCI LSRs in late 2002 and 2003 therefore represent only orders in which the CLEC did not know about the potential customer's existing SBC Yahoo! DSL, or submitted the LSR in error.

3.4 Winback Practices

When a customer switches phone service from one carrier to another, the carrier that has lost the customer often engages in "winback" activity to try to persuade the customer to return. SBC-CA has an extensive winback operation for local voice service, in which its retail marketing personnel make use of information compiled from SBC-CA computer data about customers who are changing their service. The CLEC's LSR for the customer migration is entered into SBC-CA's Service Order Retrieval and Distribution system. The starting point for winback activities is the posting of the status "complete" for the order in this system, *i.e.*, SBC-CA's records show that the customer's service has been changed to the CLEC. This information is then moved through various SBC-CA data systems over a period of about two days, resulting in a list of former customers that is provided to the SBC-CA personnel who work on winback programs.

SBC-CA's winback efforts include sending letters and making telephone calls to former customers. SBC-CA uses a variety of winback letters, which may

offer special deals to former customers (*e.g.*, discounts or rebates on some services). Some winback letters have also included the suggestion that the customer's service had been switched without the customer's consent (a practice known as "slamming"). Scripts followed by SBC-CA winback personnel in telephone calls to former customers also may include special offers and inquiries suggesting the customer was slammed. The scripts do not require the SBC-CA personnel to verify that the person with whom they are speaking is the only person in the household who is authorized to initiate changes in telephone service. A joint investigation by Telscape and SBC-CA within the last two years showed that Telscape sales personnel and SBC-CA winback personnel often talked with different members of the household for which local voice service was switched from SBC-CA to Telscape. SBC-CA's third-party verification process for substantiating allegations of slamming is applied to slamming allegations about local toll and long distance services, but not to allegations of slamming for local voice service. SBC-CA plans to extend this process to local voice service.

On December 5, 2003, AT&T, MCI, and SBC-CA filed a Motion for Adoption of Partial Settlement. The proposed partial settlement (Settlement), attached as Appendix B, is intended to settle the claims of AT&T and MCI with respect to winback practices.¹² The Settlement requires SBC-CA to remove from all its winback materials any suggestion that the former customer was slammed or that the former customer received incomplete or inaccurate information prior to making the local service change, and to educate its winback personnel to avoid making any such suggestions to former customers. The Settlement provides that

¹² As part of the settlement, AT&T MCI withdrew previously distributed prepared testimony of their witnesses on winback issues.

SBC-CA will implement its provisions within four weeks of our approval.

Telscape did not file comments on the Settlement. (See Rule 51.4.)

3.5 OSS Issues

OSS consists of five major functions supported by the ILEC's databases and information: pre-ordering, ordering, provisioning, maintenance and repair, and billing.¹³ SBC-CA's OSS functions are available to CLECs on a nondiscriminatory basis.

3.5.1. Non-recurring Charges

When a CLEC places an order for UNEs, or requests a change in configuration or disconnection of UNEs, SBC-CA is authorized to assess non-recurring service order charges to cover its costs for the ordering process, separate from the costs of the actual connection, reconfiguration, or disconnection of the UNEs.¹⁴ Service orders are processed in different ways. A "fully mechanized" service order is transmitted by the CLEC to SBC-CA electronically, and processed by computers without human intervention. A "semi-mechanized" service order is transmitted electronically by the CLEC, but requires some intervention by SBC-CA personnel in a Local Service Center (LSC) in order to be completed. A "manual" service order is generally submitted by the CLEC in the form of a facsimile transmission and requires personnel in the LSC to enter all the information into SBC-CA's order system. SBC-CA is authorized to charge different rates, based on both the UNEs ordered and the

¹³ *Triennial Review Order*, ¶ 561.

¹⁴ The costs associated with the retail services of SBC-CA (or any ILEC) may not be considered in UNE pricing. (47 C.F.R. § 51.505(d)(2).)

form of processing needed, ranging from a few cents for most fully-mechanized orders to more than \$100 for some manual orders.¹⁵

Electronically-submitted orders are eligible for fully mechanized processing according to standards and policies established by SBC-CA, with input from CLECs through the Change Management Process, a forum for CLECs and SBC to address OSS issues. Electronically-submitted orders that are processed without the need for work by LSC personnel are said to “flow through.” SBC-CA has increased the number of orders that will flow through over the course of several years, and continues to add to that group. Not all orders will flow through, however. Electronically-submitted orders may “fall out of flow-through” either because they are exceptions to flow through (*i.e.*, a special case of an order type that generally would flow through) or because they are exclusions from flow through (*i.e.*, the orders are in a category for which SBC-CA has not made fully mechanized ordering possible). Because of the large differentials in cost among the types of order processing, maximizing the number and utility of orders that are eligible for flow-through is important to CLECs.

3.5.1.1. Exceptions to Flow-through

Electronically submitted orders for UNE-P service are generally eligible for flow-through. In some circumstances, however, such orders fall out of flow-through. Four such exceptions remain at issue in this proceeding.

First, an order will fall out if it seeks to migrate from SBC-CA to a CLEC one of two telephone lines that do not “hunt” (seek the other line if the one called is unavailable). This type of order falls out of flow-through so that the

¹⁵ The initiation of this system is explained in D.98-12-079, 84 CPUC2d 272, 289 (1998).

LSC may create documentation for SBC-CA to use in properly billing the SBC-CA line remaining to the customer.

Second, an order will fall out if one of several UNEs in the order requires LSC intervention to be processed. In that case, all parts of the order are treated on a semi-mechanized basis.

Third, a CLEC's order for new service to a customer will fall out if there is working telephone service on the premises (WSOP) to which the order relates.¹⁶ A UNE-P order will fall out for this exception if the CLEC leaves blank one of the fields of the order form.

Fourth, an order to migrate a customer who is eligible for Universal Lifeline Telephone Service (ULTS) to UNE-P or UNE-L with number portability will fall out if SBC-CA does not have a current ULTS certification on file for the customer.¹⁷ LSC personnel check the certification status in order to allow SBC-CA to rebill the customer for the difference between ULTS rates and regular retail rates if it turns out that the customer did not meet the requirements for ULTS. After discussions in the CLEC User Forum in 2002, SBC-CA agreed to charge fully mechanized rates for ULTS migrations, although LSC personnel continue to be involved in those orders for SBC-CA's billing purposes. SBC-CA has not, however, changed the billing status of ULTS orders in its OSS system. Telscape is currently billed at semi-mechanized rates for ULTS migrations, with SBC-CA issuing credits for overcharges after Telscape identifies and disputes the semi-mechanized charges.

¹⁶ *E.g.*, the customer wants to add a new telephone line or a renter or a roommate wants his or her own line.

¹⁷ General Order 153 sets out the requirements for self-certification and recertification of ULTS eligibility.

3.5.1.2. Exclusions from Flow-through

SBC-CA's OSS does not currently allow all orders that are potentially able to flow through to do so. SBC-CA adds to the list of flow-through eligible orders at various times, either in response to recommendations of the Change Management Process or CLEC User Forum, or for other reasons. Changes to flow-through eligibility are announced in Accessible Letters and then incorporated in SBC's CLEC Handbook.¹⁸

3.5.1.3 EISCC Cabling Charges¹⁹

For facilities-based service, a CLEC, such as Telscape, must have a collocation facility in the central office of the ILEC, here, SBC-CA. An expanded interconnection service cross-connect (EISCC) connects SBC-CA's intermediate distribution frame to Telscape's collocation facility. In order for the facilities-based service to work smoothly, both SBC-CA and Telscape must, among other things, keep track of the assignment of EISCC cable pairs to their respective facilities. In some cases of trouble on a customer's line, the EISCC can be the source of the problem. To identify and fix the problem, a CLEC can use "tech-to-tech" testing with SBC-CA, which became generally available in April 2002. It can also order a change in "connecting facility assignment" (CFA), which is a change in the relevant EISCC cable pair.

¹⁸ The CLEC Handbook and other information and instructions for CLECs are available at SBC's CLEC web site, <https://clec.sbc.com/clec>. At the request of the parties, we take official notice of the contents of this web site.

¹⁹ Telscape's petition to set aside the submission and reopen this proceeding to take additional evidence and briefing on the EISCC issue was granted by an Administrative Law Judge's Ruling dated March 3, 2004. SBC-CA and Telscape then submitted additional briefs and exhibits.

To order a CFA change, Telscape prepares an LSR by following SBC-CA's instructions for the CFA Expedite Process. SBC-CA then makes the CFA change and bills Telscape. The billing includes the following elements: service order connect charge (\$30.43); channel connect charge (\$18.87); service order disconnect charge (\$21.38); channel disconnect charge (\$8.71); EISCC cable connect charge (\$2.11); and EISCC cable disconnect charge (\$3.35). The total that SBC-CA charges for a CFA change is \$84.85. The Telscape-SBC-CA interconnection agreement does not establish a charge for a CFA change.²⁰

3.5.2. Billing

SBC-CA has a variety of systems and processes that are employed in generating bills for CLECs and resolving billing disputes. The Customer Record Information System is used primarily for SBC-CA retail billing, but also bills CLECs that are resellers. The Carrier Access Billing System is used to bill CLECs for UNEs and interconnection products; recurring charges, non-recurring charges, and usage charges are billed through this system. Bills are presented to CLECs in formats that comply with the standards set by a voluntary national organization, the Ordering and Billing Forum.

SBC-CA LSCs are organized by products. CLECs, such as Telscape, may be assigned to multiple LSCs: Telscape has one LSC for UNE-P orders and one for all other business. LSC personnel answer billing inquiries, process adjustments for incorrectly billed amounts, and participate in resolving billing disputes. CLECs submit billing disputes to the LSC, which has the goal of resolving all correctly presented disputes within 30 days. If the dispute is not

²⁰ At the request of SBC-CA, with Telscape's agreement, we take official notice of the parties' interconnection agreement, which adopted the interconnection agreement between Pacific Bell and MCImetro Access Transmission Service LLC.

resolved in 30 days, the LSC must notify the CLEC of the dispute status. If a billing dispute is not initially resolved to the CLEC's satisfaction, the CLEC may use the LSC "escalation" procedure, which involves going to an LSC manager, then the LSC area manager, then the director of the LSC.

SBC-CA "account team" personnel are organized by CLEC. Multiple account managers may be assigned to one large CLEC or multiple CLECs may be assigned to one account manager; Telscape is in the latter category. There is also a dispute resolution process within the account team structure. The escalation process within the account team is usually invoked if the CLEC is not satisfied with the response from the LSC. Escalation moves from the CLEC's account manager, to the account team director, to the account team vice president.

Disputes may be resolved rapidly, or may take months. Once a billing dispute has lasted beyond 30 days, SBC-CA does not have any quantitative standard for the period of time within which it should be resolved. When disputes are resolved, any credits due to the CLEC may appear on the CLEC's next bill or may appear on a later bill, possibly several months later.

In any given month, Telscape typically has more than two dozen open billing disputes with SBC-CA. In any given month, Telscape typically disputes \$15,000-\$30,000 of the amounts billed by SBC-CA. Many of Telscape's disputed bills are for non-recurring charges for UNEs, but bill disputes also arise with respect to usage charges and other billing categories. Some of Telscape's billing disputes relate to inaccurate or incomplete credits for amounts agreed on in previously resolved disputes.

3.5.3. Waiver of Performance Measure Remedies

In a series of decisions in our proceeding on Monitoring Performance of Operations Support Systems, R.97-10-016, I.97-10-017, we established

performance measurements, performance criteria, and monetary incentives to help ensure that SBC-CA's OSS provides appropriate service to CLECs. In at least one instance, SBC-CA and Telscape have negotiated a settlement of Telscape's claim for overcharges through SBC-CA's internal dispute resolution procedures in which Telscape agreed to waive performance remedies. Following Telscape's waiver, SBC-CA did not report a deficiency in performance to the Telecommunications Division. SBC-CA has made a similar agreement involving waiver of performance measure remedies with more than one other CLEC.

4. Discussion

4.1. DSL and Local Voice Service

In principle, any customer of SBC-CA may switch his or her local voice service to a CLEC with one phone call to the CLEC. SBC-CA, however, does not follow that principle if the customer has SBC Yahoo! DSL. That customer must make multiple phone calls to both the CLEC and SBC-CA, as well as find a new DSL provider in order to regain DSL service.

Complainants assert that refusing to process otherwise complete and accurate requests to change local voice service is, on its face, anticompetitive and in violation of the mandate of Sec. 451 that "[a]ll rules made by a public utility affecting or pertaining to its charges or service to the public shall be just and reasonable."²¹ SBC-CA offers three justifications for its practice. First, SBC-CA contends that the complainants have shown not that customers are harmed, but merely that they are inconvenienced, by SBC-CA's refusal to allow local voice migrations of customers with SBC Yahoo! DSL. Second, SBC-CA claims that its rule is justified because numerous operational difficulties would ensue if it

²¹ The fact that the rejection of the request is automatically accomplished by a computer program does not make the rejection, which is invariant, something other than a "rule."

allowed the local service migration order to be executed. Third, SBC-CA asserts that, regardless of the impact of its rule, it is consistent with state and federal legal requirements.

SBC-CA's assertion that the complainants failed to demonstrate harm to customers is not supported by the record. The record shows that thousands of customers who wanted to change their local voice service to a CLEC were prevented from doing so when SBC-CA rejected the LSRs for the change. Many customers who want to make this change are preemptively informed by the CLECs that they will not be able to do so. The harm to the customer is SBC-CA's frustration of the customer's intention to take advantage of competitive services in the local voice marketplace, and complainants have amply demonstrated the existence of that frustration.

SBC-CA's affirmative claim that only minor inconvenience to customers results from its policy is supported neither by the record nor by common experience. In making that argument, SBC-CA puts great weight on the availability of free web-based e-mail services, such as hotmail.com and Yahoo.com. These services, SBC argues, allow anyone to have a stable e-mail address (*e.g.*, janecustomer@hotmail.com) regardless of whether the customer maintains SBC Yahoo! DSL service.

This point is accurate as far as it goes, but it does not go far enough to justify SBC-CA's policy.²² If free web-based e-mail were all that customers needed, there would be no market for SBC Yahoo! DSL, which SBC promotes at a

²² The parties expended some effort on this issue, both in the evidentiary hearing and in their briefs. In view of our analysis of its significance, we do not address it in a similar level of detail.

charge of more than \$20.00 per month.²³ More fundamentally, ending SBC Yahoo! DSL service means not simply ending the customer's e-mail address; it means ending the customer's *DSL access*. A hotmail.com e-mail address does not help customers who have lost the ability to connect to the internet because they have had to cancel their SBC Yahoo! DSL as a step in the process of transferring their local voice service.

SBC-CA also ignores the impact of the process itself on the customer's ability to change local voice provider. The SBC Yahoo! DSL subscriber must have at least three interactions in order to change local voice providers and regain DSL access—with SBC-CA to cancel SBC Yahoo! DSL, with the CLEC to arrange the local voice service change, and with a new DSL provider—while the SBC-CA customer without SBC Yahoo! DSL who wants to change local voice providers merely has to call the CLEC. Even if the customer is willing to give up DSL service altogether, he or she still needs to have at least two interactions, with both SBC-CA and the CLEC, to make the local voice service change.

SBC-CA does not argue that it is not technically possible to allow the migration of the local voice customer with SBC Yahoo! DSL to the local voice service of a CLEC using UNE-P. Rather, as AT&T points out, most of the operational issues SBC-CA advances are related to the administration of possible line splitting arrangements between the new voice CLEC and the DSL provider.²⁴

²³ An example is "SBC Yahoo! DSL Special Offer," on the SBC "California Residential Phone Service" web site, <http://www.sbc.com/gen/landing-pages?pid=3308> (April 13, 2004). At the evidentiary hearing, the parties offered a number of exhibits consisting of excerpts from various web sites. Because the contents of the web sites are not reasonably subject to dispute (though their significance may be disputed), we take official notice of the contents of the web sites of the parties to this proceeding.

²⁴ The FCC defines line splitting as "the scenario where one competitive LEC provides narrowband voice service over the low frequency portion of a loop and a second

These fears are not realistic, since the two line-splitting CLECs have the active roles, and the ILEC has a very limited role. Indeed, the FCC has reminded ILECs that they must facilitate line splitting.²⁵ Nothing in the record supports SBC-CA's speculation that it would be overwhelmed by the administrative problems of line splitting if it stopped blocking SBC Yahoo! DSL customers' changes in local voice provider.

SBC-CA also identifies a potential operational problem in billing the SBC Yahoo! DSL customer whose local voice service has been moved to a CLEC, since SBC-CA will no longer be providing a bill for local voice service, on which it had been including the SBC Yahoo! DSL charge. AT&T points out, however, that the current requirements of a credit card or Yahoo! "wallet" account on file for SBC Yahoo! DSL customers gives the SBC Yahoo! DSL providers options for billing a customer who no longer has SBC-CA local voice service. Whether or not these are the best ideas, they demonstrate that there are likely to be solutions to the potential billing issues. The record does not show that billing would be such an insuperable problem as to justify SBC-CA's refusal to allow the migration of the SBC Yahoo! DSL customer's local voice service to a CLEC.

Finally, SBC-CA asserts that its policy is in accord with federal and state regulatory requirements, and thus cannot be in violation of Sec. 451. SBC-CA's regulatory arguments fall into three broad groups: SBC-CA is in compliance with its obligations to support line sharing and line splitting; it is in compliance

competitive LEC provides xDSL service over the high frequency portion of that same loop." *Triennial Review Order*, ¶ 251.

²⁵ *Triennial Review Order*, ¶¶ 251, 252.

with its obligations to make UNEs available and cannot be forced to create new UNEs; and it is not depriving customers of choice.

SBC-CA's compliance with its regulatory obligations to support line sharing and line splitting is not relevant to this proceeding. It is not the provision of DSL services that is at issue, but the effect of SBC-CA's practices related to SBC Yahoo! DSL on the market for local voice services. This distinction between DSL and the impact of DSL practices on competition in local voice markets has also been made by other state commissions, in varying circumstances.²⁶ Similarly, complainants do not question, and we do not need to decide, whether SBC-CA has properly unbundled the HFPL or made the HFPL available to CLECs on a nondiscriminatory basis. We take as given SBC-CA's unbundling of the HFPL and the existence of its line sharing arrangements with, *e.g.*, ASI.

²⁶ *See, e.g.*, Petition by Florida Digital Network, Inc. for arbitration of certain terms and conditions of proposed interconnection and resale agreement with BellSouth Telecommunications, Inc. under the Telecommunications Act of 1996, Florida Public Service Commission Docket No. 010098-TP, Order No. PSC-02-0765-FOF-TP, 2002 Fla. PUC LEXIS 401 (June 2, 2002) (arbitration); *In re* BellSouth's provision of ADSL Service to end-users over CLEC loops, Louisiana Public Service Commission, Docket R-26173, Order R-26173, 2002 La. PUC LEXIS 20 (Dec. 18, 2002) (rulemaking); Petition of MCImetro Access Transmission Services, LLC and MCI WorldCom Communications, Inc. for Arbitration of Certain Terms and Conditions of Proposed Agreement with BellSouth Telecommunications, Inc. Concerning Interconnection and Resale under the Telecommunications Act of 1996, Georgia Public Utilities Commission, Docket No. 11901-U, 2003 Ga. PUC LEXIS 38 (Oct. 21, 2003) (arbitration); Petition of Cinergy Communications Company for Arbitration of an Interconnection Agreement with BellSouth Telecommunications, Inc. pursuant to 47 U.S.C. Section 252, Kentucky Public Service Commission Case 2001-00432, 2002 Ky. PUC LEXIS 722 (Oct. 15, 2002), *aff'd sub nom. BellSouth Telecommunications, Inc. v. Cinergy Communications Co.*, 297 F.Supp.2d 946 (E.D.Ky.2003) (arbitration).

SBC-CA fears that, if we find it in violation of its legal obligations, we would require it to unbundle the LFPL. SBC-CA, relying on the FCC's conclusion that unbundling the LFPL is not required,²⁷ asserts we cannot order such relief. In fact, however, SBC-CA would not have to unbundle anything more than it already has if it allowed SBC Yahoo! DSL customers to switch local voice service to a UNE-P CLEC. The CLEC "wins" the loop when it wins the voice customer, thus setting the stage for, if anything, a conventional line splitting arrangement. Looking at the same situation from another angle, SBC-CA urges that we would force it to provide DSL service when it is no longer the voice provider, contrary to the policy announced by the FCC in *Joint Application by BellSouth Corporation, BellSouth Telecommunications, Inc. and BellSouth Long Distance, Inc. for Provision of In-Region, InterLATA Services in Georgia and Louisiana*, CC Docket No. 02-35, 17 F.C.C.R. 9018 (May 15, 2002), ¶157. But since SBC-CA does not provide the DSL service, we cannot and do not force it to continue to do so.²⁸

SBC-CA argues that its practices cannot be harming consumers or competition because consumers continue to have choices in high-speed internet access services—for example, cable modem, wireless services, or DSL providers

²⁷ *Triennial Review Order*, ¶270.

²⁸ Uncertainty about how we should treat the various SBC entities involved runs through the presentations of all the parties, including SBC-CA. Complainants urge that we treat all SBC affiliates as "one SBC," without regard to their formal corporate status or separate functions as ILEC (SBC-CA), DSL transport provider (ASI), or ISP (SBC IS). SBC-CA at times insists on the separation, (*e.g.*, in arguing that we cannot provide any relief if ASI and SBC IS are not parties), while at other times it relies on lack of separation (*e.g.*, in arguing that *it* cannot be forced to provide DSL to a CLEC's voice customer). Since, as explained below, we grant relief based on SBC-CA's behavior alone, it is not necessary for us to examine in any detail the relationship among these affiliated entities beyond their collaboration in the SBC Yahoo! DSL retail product.

other than SBC Yahoo! DSL. SBC-CA is, however, confusing the market for high-speed services with the market for local voice services. Nothing in the record supports SBC-CA's suggestion that choice of high-speed internet access service is a substitute for choice of local voice service.

SBC-CA compounds this confusion when it argues in its reply brief that the application of federal antitrust analysis shows that it has not violated Sec. 451 because it does not have market power in the provision of broadband services. The Legislature did not incorporate antitrust doctrines into Sec. 451 (*compare* Official Code of Georgia Annotated, Section 46-5-169(4)), though it is well-settled that we may consider antitrust issues in our decisions on certificates of public convenience and necessity. *Northern California Power Agency v. PUC* (1971) 5 Cal.3d 370. No party cites any case in which we have based our interpretation of Sec. 451 on federal antitrust doctrines, and we see no need to do so in this case.

AT&T urges that, in addition to violating Sec. 451, SBC-CA's policy of refusing to process orders for changing the local voice service of a customer with SBC Yahoo! DSL is discriminatory, in violation of Sec. 453(a)²⁹. The SBC-CA local voice customer without SBC Yahoo! DSL may simply choose another local voice provider; the SBC Yahoo! DSL customer may not. This, AT&T argues, is unjustifiable discrimination against some SBC-CA local voice customers. We agree. In enacting sec. 453(a), the Legislature created "a broad ban on discriminatory conduct." *Gay Law Students Assn. v. Pacific Tel. & Tel. Co.* (1979) 24 Cal.3d 458, 478. A customer who wants to use a "mix and match" approach to

²⁹ Sec. 453(a) provides that "[n]o public utility shall, as to rates, charges, service, facilities, or in any other respect, make or grant any preference or advantage to any corporation or person or subject an corporation or person to any prejudice or disadvantage."

acquiring different services from different providers is deprived by SBC-CA's policy of one of the principal advantages of a competitive telephone marketplace. SBC-CA's policies subject such a customer to disadvantage in the marketplace. The arguments advanced by SBC-CA with respect to complainants' claims under sec. 451, which we have analyzed above, for the same reasons do not provide an adequate defense to the claims under sec. 453(a).

SBC-CA has not justified the barrier to competition and discrimination among customers in the local voice market that it has created by its refusal to allow its local voice customers with SBC Yahoo! DSL service to take their local voice business to a UNE-P CLEC. SBC-CA must cease this anticompetitive and discriminatory behavior. The record does not support the same conclusion if the CLEC is using UNE-L. We therefore limit our decision to situations where the CLEC provides services using UNE-P.

Although SBC-CA protests that any relief we order would have to include ASI and SBC IS, neither of which is a party, we can require SBC-CA to cease its unlawful practice without ordering ASI or SBC IS to do anything at all. Our order today may lead SBC-CA, ASI, and SBC IS to reevaluate their relationships with respect to SBC Yahoo! DSL, but we do not impose any legal obligations on non-parties ASI and SBC IS.³⁰

4.2 Winback Practices

The record shows that, in its residential local voice service winback efforts, SBC-CA has systematically suggested to former customers that they may have been slammed. Because SBC-CA does not verify that its suggestions about slamming have been made to the only person in a household authorized to

³⁰ We do not authorize SBC-CA to provide an access loop to ASI where there is no purchase of the loop by a local customer, ASI, or the CLEC.

change local voice service, this practice has the potential for generating inaccurate reports of slamming. The Settlement commits SBC-CA to a comprehensive review of its winback materials that will result in removal of any suggestions that the former customer may have been slammed or misled, and commits SBC-CA to training its winback personnel not to make such suggestions. These steps, when implemented, will substantially reduce the possibility of inaccurate slamming allegations without inhibiting the former customer from volunteering information that he or she had been slammed. The Settlement should therefore be approved. In addition, we will order SBC-CA to carry out its representation at the evidentiary hearing that the third-party verification process will be applied to local voice service, to ensure an independent verification of slamming allegations consistent with that used for other services.

Although it is clear that SBC-CA's winback program is aggressive and well-organized, the record does not support Telscape's allegation that SBC-CA is improperly jumping the gun in its winback efforts by using confidential information from the LSR process (customer proprietary network information) before the change of local voice service has occurred. There is also insufficient evidence to support Telscape's claim that SBC-CA's special winback offers are predatory and anticompetitive. While Telscape's concerns about SBC-CA's winback offers are plausible in view of the differential in resources between Telscape and SBC-CA, there is no evidence in this record that SBC-CA's offers in fact are effective in retrieving former customers or that they do not comply with established tariffs or other relevant regulatory requirements. Nor is this proceeding the proper forum for considering Telscape's suggestion that we should impose a four-month moratorium on SBC-CA's winback efforts. This is a

policy preference, not a remedy for a demonstrated violation of a provision of law or of one of our orders, as required by Sec. 1702.

4.3 OSS Issues

We have long considered access to OSS functions to be an essential element of a competitive local telephone market. *See, e.g.*, D.96-02-072, 65 CPUC2d 65, 83 (1996); D.98-12-079, 84 C.P.U.C.2d 272 (1998). In this complaint, Telscape makes a broad critique of SBC-CA's OSS performance. Telscape asserts that, viewed as a whole, the OSS structure and the way SBC-CA employs it create anticompetitive barriers that are so severe as to violate both our UNE pricing orders and Sec. 451. The record shows that some aspects of SBC-CA's OSS implementation are not in compliance with SBC-CA's legal obligations, but it does not show that the problems are so pervasive or intractable that we ought to accept Telscape's implicit invitation to become the day-to-day supervisor of SBC-CA's OSS.

4.3.1 Non-recurring Charges

4.3.1.1. Exceptions to Flow-through

The specific exceptions to flow through that Telscape challenges are a heterogeneous lot, but Telscape has demonstrated that, as to some of them, SBC-CA's OSS processes result in charges to CLECs that are not just and reasonable, in violation of Sec. 451. The source of the illegality is not the charges themselves, which are in accord with the various pricing orders issued in our OANAD proceeding. Rather, the problems arise in SBC-CA's practices leading to the assessment of charges that are correct for what is billed—but the choice of what to bill is not justifiable.

In the circumstance in which one of the SBC-CA customer's lines is being changed to a CLEC, the evidence shows that the order falls out of

flow-through so that SBC-CA can reorganize its own billing for the remaining line. This results in a semi-mechanized charge to the CLEC for the benefit of SBC-CA's retail operations. In support of its practice, SBC-CA asserts that this issue was never raised in either the Change Management Process or the CLEC User Forum, and SBC-CA therefore had no reason to believe that this exception mattered to any CLEC's business and had no reason to take steps to change it. Raising an issue in such voluntary forums is not, however, a condition precedent to bringing a complaint under Sec. 1702.

SBC-CA's implicit argument that the continued existence of the exception is essentially harmless because CLECs have not previously complained about it is not supportable in this circumstance. Although SBC-CA has some discretion in making improvements to flow-through, its options must be exercised within legal bounds. The record shows that the semi-mechanized charge here is the result of SBC-CA's retail operational requirements. Pursuant to 47 C.F.R. § 51.505(d)(2), SBC-CA is simply not authorized to impose a charge based on its own retail costs. SBC-CA's billing of this charge is therefore not just and reasonable, in violation of Sec. 451. SBC-CA must refund to Telscape the difference between the semi-mechanized and fully mechanized rate for any semi-mechanized order charges billed to Telscape that are attributable to this "partial migration" exception.

SBC-CA agreed in 2002 to change its policy on the rate for ULTS migrations, from semi-mechanized to fully mechanized. SBC-CA has not, however, changed the OSS system, so bills continue to be generated at semi-mechanized rates. Telscape pays these bills and then seeks a refund. SBC-CA asserts that, because Telscape ultimately gets its money back, this issue is resolved. Nothing in our UNE pricing decisions, however, authorizes SBC-CA to

impose charges, even subject to refund, to which it has agreed it is not entitled. Such charges cannot be just and reasonable.³¹ SBC-CA should therefore take whatever steps are necessary to ensure that bills for ULTS migrations are generated at the proper rate in the first instance.³²

A different problem is presented by the WSOP exception. The record shows that a UNE-P order will fall out under this exception if the CLEC's order leaves a particular field blank. The instructions given in SBC-CA's Local Service Ordering Requirements, however, identify that field as "conditional," meaning that it may not need to be filled in. The instructions allow, if not encourage, a CLEC to fill out the order in a way that causes the order to fall out of flow-through, even though there may be no reason for the WSOP exception to be applied. This defeats the CLEC's right to nondiscriminatory access to OSS and results in higher semi-mechanized charges that are a windfall to SBC-CA. These charges are not just and reasonable. SBC-CA should revise the instructions for the WSOP field to eliminate the misleading implication of the current instructions. Because the record shows that clarifying the instructions is likely to prevent UNE-P orders from falling out of flow-through, we need not reach Telscape's contention that the WSOP exception is itself unjustified.

Telscape has not shown a violation of law in SBC-CA's practice of applying semi-mechanized charges to an entire order that falls out of flow-

³¹ *Cf. Hidden Valley West v. San Diego Gas & Electric Co.*, D.87305, 81 C.P.U.C. 627, 636 (1977) (utility violates sec. 451 if it fails to return balance to customers who made payments based on estimated costs that were higher than actual costs).

³² Telscape presented testimony on an analogous claim about SBC-CA's billing of end-user returns, the migration of a UNE-P customer from a CLEC to SBC-CA. In its brief, however, Telscape conceded that this claim was no longer alive, so we do not address it here.

through because one of its elements requires LSC intervention. There is no evidence that this treatment occurs because of SBC-CA's retail needs or that it is based on any other impermissible criterion. It may make orders more expensive for CLECs, and it might be possible for SBC-CA to change the way such orders are treated, but that does not mean that SBC-CA's current practice is unlawful.

4.3.1.2. Exclusions from Flow-through

In its brief, Telscape acknowledges that evaluating its complaints about the pace at which SBC-CA is implementing flow-through improvements and the choices SBC-CA has made about priorities for flow-through is largely a matter of judgment, requiring us to decide how fast is fast enough, and how helpful to CLECs is helpful enough. It is true that SBC-CA's control over the OSS process gives it the ability to influence CLECs' business by making some activities more expensive than others, or by keeping some activities more expensive than they perhaps could be. It is also true that the OSS process is complex; it is not reasonable at this time to expect that process to meet all needs of all CLECs all the time. While the existence of forums such as the Change Management Process and the CLEC User Forum does not insulate SBC-CA from complying with its legal obligations, it is significant that there is no evidence in the record that other CLECs share Telscape's view of SBC-CA's progress, or lack of it, on flow-through improvements. Telscape's evaluation alone is not enough to persuade us that we ought to interfere in SBC-CA's development and implementation of flow-through improvements.

4.3.1.3. EISCC Cable Charges

With the implementation of tech-to-tech testing, SBC-CA has made available a direct method of checking possible EISCC trouble. Telscape acknowledges that tech-to-tech testing will improve its ability to deal with EISCC

problems at lower cost, but adheres to its position that SBC-CA's billing of \$84.85 for CFA changes, when they are ordered, is too high. Telscape locates the pricing problem in SBC-CA's choice of what UNEs to put together to make up the CFA charge. Telscape asserts that the CFA change work is more accurately captured by a loop channel change charge (\$15.50) and a mechanized service order charge (\$1.10).

In the absence of a charge specified in the interconnection agreement, we are unable to resolve this dispute. Telscape may be making a sensible pricing proposal. SBC-CA's very different pricing, combining a number of UNEs, may be justifiable. The correct pricing may lie in some other combination of charges, or a new, separate charge. Whatever the answer, this complaint proceeding is not the appropriate forum in which to try to find, or create, a price for a UNE.

4.3.2. Billing

SBC-CA's systems for billing CLECs are complex, as are its methods of resolving billing disputes. SBC-CA notes that its billing meets high standards of formal correctness and that many employees deal with CLEC billing issues. Telscape does not dispute these points; rather, Telscape asserts, the problems lie in substantively erroneous charges presented in a formally correct manner and in inordinately long periods of time needed to resolve billing disputes.

Some of the billing issues Telscape describes as substantive are simply the reflection in its bills of the issues about non-recurring charges we have addressed in Sec. 4.3.1, and need not reexamine here. Some of the issues, such as how SBC-CA presents usage information in its bills, are not appropriate for resolution in a complaint proceeding.

The record shows that a small CLEC, like Telscape, must be very alert and very persistent to make effective use of the structure and policies SBC-CA has developed to handle billing disputes. Telscape has shown that, having successfully negotiated a resolution to a billing dispute, it often has to wait for more than one billing interval to receive the agreed credit, and sometimes the initially credited amount is inaccurate. By failing to return proper credits to Telscape (or any other CLEC) promptly, SBC-CA is imposing an unjustified, if temporary, charge.³³ This violation of Sec. 451's requirement that all charges must be just and reasonable would be remedied if CLECs were promptly credited in the correct amount after disputes are resolved. SBC-CA should review its policies and systems for posting credits to CLECs and make any changes that are needed to ensure that CLECs are correctly credited on their next bill after a dispute is resolved.

4.3.3. Waiver of Performance Measure Remedies

Telscape urges that SBC-CA not be allowed to conclude settlements of disputed billings with CLECs that include waivers of performance remedies. Telscape notes that such settlements deprive other CLECs and the Commission of information about SBC-CA's performance, and argues that they could allow SBC-CA to discriminate in fact among CLECs by settling with some CLECs on terms of which others are unaware and therefore cannot use.

We adhere to our strong policy in favor of settlements. See, *e.g.*, *Re Pacific Bell*, D.92-07-076, 45 C.P.U.C.2d 158, 169 (1992). In this case, however, the nature of the settlements negotiated by SBC-CA is inconsistent with our order in D.02-06-006, which clarified details of the implementation of SBC-CA's

³³ *Cf. Hidden Valley West v. SDG&E*, 81 C.P.U.C. at 636.

Performance Incentive Plan. In that decision, we expressed our intention “ to preserve the incentive nature of the PIP by maintaining the relationship between overall performance and incentive amounts.” (*mimeo.*, p. 2) The record in this case shows that at least one settlement between Telscape and SBC-CA resulted in the effective disappearance of any performance measure remedy. Although Telscape could agree to waive payment of remedies to itself, that waiver could not authorize SBC-CA either to omit payment of remedies for the benefit of ratepayers or to omit reporting the performance failure. SBC-CA must now pay the remedies for the benefit of ratepayers and make the reports for all performance problems for which Telscape agreed to waive performance remedies.

5. Assignment of Proceeding

Geoffrey F. Brown is the Assigned Commissioner and Anne E. Simon is the assigned Administrative Law Judge in this proceeding.

Findings of Fact

1. Telscape provides facilities-based local voice service in California, using its own switches and unbundled network elements (UNEs) leased from SBC-CA; this arrangement is often referred to as UNE-Loop (UNE-L).

2. Telscape also provides local voice service in California using the “UNE platform” (UNE-P), which consists of leasing from SBC-CA all the elements needed for service to the end user customer.

3. AT&T provides local voice service in California using UNE-P.

4. MCI provides local voice service in California using UNE-P.

5. SBC-CA is an incumbent local exchange carrier (ILEC) that provides local and long distance services. It is a wholly owned subsidiary of SBC Communications, Inc. (SBC).

6. In California, as of the end of 2002, about 49% of high-speed internet connections were via DSL.

7. Through a joint marketing and sales agreement with SBC IS, SBC-CA markets to mass market customers the retail product SBC Yahoo! DSL, which consists of DSL transport provided by ASI through UNEs leased from SBC-CA; ISP services provided by SBC IS; and content provided by Yahoo!, Inc.

8. In California, SBC Yahoo! DSL is available only to local voice service customers of SBC-CA.

9. If a CLEC using UNE-P presents a complete and accurate LSR to SBC-CA for the migration of the local voice service of an SBC-CA mass market customer to the CLEC, SBC-CA will automatically reject the migration request if the customer also has SBC Yahoo! DSL.

10. If a CLEC using UNE-P presents a complete and accurate LSR to SBC-CA for the migration of the local voice service of an SBC-CA mass market customer to the CLEC, there are no technical reasons that require SBC-CA to reject the migration request if the customer also has SBC Yahoo! DSL.

11. If a CLEC using UNE-P presents a complete and accurate LSR to SBC-CA for the migration of the local voice service of an SBC-CA mass market customer to the CLEC, there are no operational considerations that require SBC-CA to reject the migration request if the customer also has SBC Yahoo! DSL.

12. The record does not support any conclusions about whether SBC-CA is or is not justified in rejecting the migration request if a CLEC using UNE-L presents a complete and accurate LSR to SBC-CA for the migration of the local voice service of an SBC-CA mass market customer who also has SBC Yahoo! DSL to the CLEC.

13. SBC-CA's rejection of requests to migrate a mass-market customer from SBC-CA local voice service to the local voice service of a CLEC using UNE-P to provide such service, solely on the basis that the customer subscribes to SBC Yahoo! DSL, is not just and reasonable.

14. SBC-CA winback personnel receive information about former residential local voice customers no less than two days after its order system shows the LSR as "complete."

15. SBC-CA's winback efforts include letters and telephone calls to former customers, which may offer special deals to former customers.

16. SBC-CA's winback efforts may include the suggestion that the former customer has been slammed.

17. SBC-CA's third-party verification process does not apply to allegations of slamming for residential local voice service.

18. Telscape did not file comments on the Settlement.

19. The Settlement is reasonable in light of the whole record.

20. The Settlement is in the public interest.

21. SBC-CA's OSS allow CLECs non-discriminatory access to the functions of pre-ordering, ordering, provisioning, maintenance and repair, and billing.

22. SBC-CA is authorized to impose non-recurring service order charges when a CLEC places an order for UNEs, or requests a change in configuration or disconnection of UNEs, to cover SBC-CA's costs for the ordering process.

23. SBC-CA is not authorized to impose charges for UNEs when SBC-CA's costs are attributable to its retail services.

24. An electronically-submitted order to migrate one of two telephone lines that do not hunt of an SBC-CA customer to a CLEC using UNE-P falls out of

flow-through so that LSC may create documentation for SBC-CA to use in properly billing the SBC-CA line remaining to the customer.

25. An electronically submitted UNE-P order with more than one UNE, one of which requires LSC intervention to be processed, falls out of flow-through. In that case, all parts of the order are treated on a semi-mechanized basis.

26. An electronically submitted UNE-P order for new service falls out of flow-through if the CLEC does not put a code in the field of the order intended to check for working service on premises (WSOP).

27. An electronically-submitted order to migrate a customer who is eligible for Universal Lifeline Telephone Service (ULTS) to UNE-P or UNE-L with number portability falls out of flow-through so that LSC personnel may check the ULTS certification status in order to allow SBC-CA to rebill the customer for the difference between ULTS rates and regular retail rates if the customer did not meet the requirements for ULTS.

28. In 2002, SBC-CA agreed to charge fully-mechanized rates for electronically submitted orders to migrate a ULTS customer to UNE-P or UNE-L with number portability.

29. SBC-CA currently bills electronically submitted orders to migrate a ULTS customer at semi-mechanized rates and then issues credits for overcharges after a CLEC identifies and disputes the semi-mechanized charges.

30. SBC-CA's OSS does not currently allow all orders that are potentially able to flow through to do so. SBC-CA adds to the list of flow-through eligible orders at various times.

31. An expanded interconnection service cross-connect (EISCC) connects SBC-CA's intermediate distribution frame to a CLEC's collocation facility in SBC-CA's central office.

32. SBC-CA made “tech-to-tech” testing generally available to CLECs in April 2002, for, among other things, identifying EISCC problems.

33. A change in “connecting facility assignment” (CFA) is a change in the relevant EISCC cable pair.

34. The Telscape-SBC-CA interconnection agreement does not establish a charge for a CFA change.

35. SBC-CA imposes non-recurring charges of \$84.85 for a CFA change, consisting of service order connect charge (\$30.43); channel connect charge (\$18.87); service order disconnect charge (\$21.38); channel disconnect charge (\$8.71); EISCC cable connect charge (\$2.11) ; and EISCC cable disconnect charge (\$3.35).

36. Although SBC-CA has a goal of resolving billing disputes with CLECs within 30 days, many disputes are not resolved within that time period.

37. After a billing dispute with a CLEC has been resolved, there is no specified period of time within which SBC-CA provides credit to the CLEC for the agreed amount.

38. SBC-CA has negotiated settlements of CLECs’ claims for overcharges in which the CLEC agreed to waive performance remedies.

39. When SBC-CA and a CLEC enter into a settlement in which the CLEC agrees to waive performance remedies, SBC-CA does not report the issue in its performance measure reporting to the Commission and does not pay performance remedies for the benefit of ratepayers.

Conclusions of Law

1. SBC-CA’s rejection of requests to migrate a mass-market customer from SBC-CA local voice service to the local voice service of a CLEC using UNE-P to

provide such service, solely on the basis that the customer subscribes to SBC Yahoo! DSL, is not just and reasonable and therefore violates Sec. 451.

2. SBC-CA's rejection of requests to migrate a mass-market customer from SBC-CA local voice service to the local voice service of a CLEC using UNE-P to provide such service, solely on the basis that the customer subscribes to SBC Yahoo! DSL, subjects its customers with SBC Yahoo! DSL to disadvantage and therefore violates Sec. 453(a).

3. SBC-CA should cease its practice of rejecting requests to migrate a mass-market customer from SBC-CA local voice service to the local voice service of a CLEC using UNE-P to provide such service, solely on the basis that the customer subscribes to SBC Yahoo! DSL.

4. In order to minimize disruption to customers, CLECs, and SBC-CA, SBC-CA should be given 90 days from the effective date of this order to adjust its systems to end the rejection of CLEC orders for migration a mass-market customer with SBC Yahoo! DSL from SBC-CA local voice service to the local voice service of a CLEC using UNE-P to provide such service.

5. The Settlement is reasonable in light of the whole record, consistent with law, and in the public interest.

6. In order to reduce the possibility of inaccurate allegations of slamming in residential local voice service, SBC-CA should include residential local voice service in its third-party verification process.

7. SBC-CA's imposition of semi-mechanized rates for an electronically-submitted order to migrate one of two telephone lines of an SBC-CA customer to a CLEC using UNE-P is attributable to SBC-CA's retail operations and is therefore not just and reasonable and violates Sec. 451.

8. SBC-CA should cease charging semi-mechanized rates for an electronically-submitted order to migrate one of two telephone lines that do not hunt of an SBC-CA customer to a CLEC using UNE-P and should refund to Telscape the difference between the semi-mechanized and fully mechanized rate for any semi-mechanized order charges billed to Telscape that are attributable to this exception.

9. SBC-CA's continued billing at semi-mechanized rates of electronically submitted orders to migrate a ULTS customer to UNE-P or UNE-L with number portability, giving credits for overcharges to the CLEC later, is not just and reasonable.

10. SBC-CA should revise its OSS processes to ensure that bills for ULTS migrations are generated at the proper rate in the first instance.

11. The current misleading instructions for how a CLEC should treat the WSOP field for an electronically submitted order for UNE-P service are inconsistent with CLECs' rights to nondiscriminatory access to OSS and result in service order charges that are not just and reasonable.

12. SBC-CA should revise the instructions for the WSOP field to eliminate the misleading implication of the current instructions.

13. SBC-CA's imposition of semi-mechanized charges for an entire order when one UNE causes the order to fall out of flow-through does not violate SBC-CA's obligations under our UNE pricing decisions or other applicable law.

14. In the absence of a charge set for a change to a connecting facilities assignment (CFA) in the interconnection agreement between SBC-CA and Telscape, SBC-CA's imposition of non-recurring charges for a CFA change based on service order connect and disconnect, channel connect and disconnect, and

EISCC cable connect and disconnect charges does not violate SBC-CA's obligations under our UNE pricing decisions or other applicable law.

15. By failing to promptly return proper credits to CLECs after a billing dispute has been resolved, SBC-CA imposes a charge that is not just and reasonable and therefore violates Sec. 451.

16. SBC-CA should review its OSS policies and systems and make any changes that are needed to ensure that CLECs are correctly credited on their next bill after a billing dispute is resolved.

17. SBC-CA's negotiation of settlement agreements with CLECs in which the CLEC agrees to waive performance remedies violates our orders related to SBC-CA's Performance Incentive Plan if SBC-CA does not pay remedies for the benefit of ratepayers and report the performance failure to the Commission.

O R D E R

IT IS ORDERED that:

1. Within 90 days of the effective date of this order, Pacific Bell Telephone Company (SBC-CA) must cease rejecting otherwise accurate and complete requests to migrate a mass-market customer from SBC-CA local voice service to the local voice service of a competitive local exchange carrier (CLEC) using the unbundled network element platform (UNE-P) to provide such service, solely on the basis that the customer subscribes to SBC Yahoo! DSL (or to any additional or subsequent retail digital subscriber line (DSL) product marketed by SBC-CA).

2. The Settlement Among SBC California (Pacific Bell Telephone Company), AT&T Communications of California, Inc. and WorldCom, Inc. (MCI) of Slamming and Winback Issues Designated for Hearing by the Administrative

Law Judge and Assigned Commissioner in Case 02-11-011, submitted for approval on December 5, 2003, is approved.

3. Within 30 days of the effective date of this order, SBC-CA shall include residential local voice service in the services subject to its third-party verification process for allegations of slamming.

4. Within 60 days of the effective date of this order, SBC-CA shall cease charging semi-mechanized rates for an electronically-submitted order to migrate one of two telephone lines that do not hunt of an SBC-CA customer to a CLEC using UNE-P and shall refund to Telscape the difference between the semi-mechanized and fully mechanized rate for any semi-mechanized order charges billed to Telscape that are attributable to this exception.

5. Within 60 days of the effective date of this order, SBC-CA shall revise its OSS processes to ensure that bills for migrating a Universal Lifeline Telephone Service (ULTS) customer to UNE-P or UNE-Loop with number portability are generated at the proper fully-mechanized rate in the first instance.

6. Within 60 days of the effective date of this order, SBC-CA shall revise the instructions for the working service on premises field of its Local Service Request (LSR) form to eliminate the misleading implication of the current instructions that it is permissible to leave the field blank and still have the LSR processed at fully-mechanized rates.

7. Within 60 days of the effective date of this order, SBC-CA shall make any changes to its operational support systems policies and systems that are needed to ensure that CLECs are correctly credited on their next bill for amounts agreed to be due them after a billing dispute is resolved.

8. Within 15 days of the effective date of this order, SBC-CA shall pay performance remedies for the benefit of ratepayers and make the reports for all performance problems for which Telscape has previously agreed in settlements with SBC-CA to waive performance remedies.

9. This proceeding is closed.

This order is effective today.

Dated _____, at San Francisco, California.

APPENDIX A

TABLE OF ACRONYMS

ASI	SBC Advanced Solutions, Inc.
CFA	Connecting facility assignment
CLEC	Competitive local exchange carrier
DSL	Digital subscriber line (broadband service that relies on the traditional copper telephone wire to transmit broadband data to and from the service customer's location)
EISCC	Expanded interconnection service cross-connect (between intermediate distribution frame and collocation facility)
FCC	Federal Communications Commission
HFPL	High frequency portion of the [copper wire] loop
ISP	Internet service provider
LFPL	Low frequency portion of the [copper wire] loop
ILEC	Incumbent local exchange carrier
LSC	Local Service Center [of SBC-CA]
LSR	Local Service Request
OANAD	Open Access and Network Architecture Development of Dominant Carrier Networks proceeding
OSS	Operational support systems
SBCIS	SBC Internet Services
ULTS	Universal Lifeline Telephone Service
UNE	unbundled network element
UNE-L	UNE-Loop (facilities-based services, using CLEC's switches and UNEs leased from ILEC)
UNE-P	unbundled network element platform (services provided by leasing from ILEC all elements needed for service to the end-user customer)

(END OF APPENDIX A)

APPENDIX B
